

NON-BEVELED MIRRORS WITH LIGHT FIXTURES

If a non-beveled mirror light fixture requires a *diameter* cut:

- AG can fabricate this in-house.
- **Benefit:** Faster production time and significantly lower cost.

If a non-beveled mirror light fixture requires a *rectangle* cut:

- This needs to be fabricated by the tempering company, because a water jet is required.
- **Drawback:** Longer production time and significantly higher cost.
