

WEIGHT RESTRICTIONS: **GRAB BAR VS. TOWEL BAR**

RECOMMENDED

If a grab bar is in the shower, avoid installing a towel bar on the glass.

ACCEPTABLE

If the homeowner insists on a towel bar, it should only be placed on the **outside** of the glass.

NOT RECOMMENDED

If they insist on towel bars **both inside and outside**, they must acknowledge and sign off on the safety risk.

Grab Bar (Mounted in the Wall)

- **Weight Capacity: 250-500 lbs**, depending on installation method and anchoring.

Towel Bar (Mounted on Shower Glass)

- **Weight Capacity: 5-15 lbs**—strictly designed for towels.

Important Warning: Towel bars are not designed to support body weight – pulling on them may cause detachment, create a fall risk, and potentially break the glass.

Acknowledgment of Towel Bar Installation Inside Shower

This document serves to ensure that you, the customer, are fully informed of the potential hazards associated with installing towel bars inside a shower where grab bars are also present.

Towel bars inside the shower can be easily mistaken for grab bars, which can create a safety hazard. If a user becomes unbalanced and instinctively reaches for support, a towel bar will not be able to support the weight of most individuals, potentially leading to injury.

While it is advised not to install towel bars inside the shower when grab bars are present, you, the customer, have specifically requested their installation. By signing this document, you acknowledge that you understand the potential risks and accept responsibility for this decision.

Customer Acknowledgment:

I, _____, acknowledge that I have been informed of the potential hazard of installing towel bars inside the shower where grab bars are present. I understand that towel bars are not designed to support body weight and may create a safety risk. Despite this, I request the installation of towel bars as specified in my project.
