

Glass Tile Application

To manage expectations: **assume the tile will crack 100% of the time** when drilling for hinge installation. Cracks are superficial and often hidden behind the hinge plate.

Alluring Glass uses a proven method that securely anchors into the subsurface, ensuring structural integrity even if the tile cracks. If you choose to replace the tile, **there is no guarantee it won't crack again** during reinstallation. Shower installation will be paused until the replacement is complete.

We've performed hundreds of these installs and continually refine our process for consistent, high-quality results.

Door Installataion Methods For Glass Tile

Standard Hinges:
Four Holes Per Hinge

Off-Set Hinges:
Three Holes Per Hinge

Header System, With Pivot Hinge: One Hole Per Side, Two Holes Total

What Glass Tile Looks Like When Cracked
