

# HOW TO SCRATCH YOUR SHOWER GLASS

## **Summary:**

Only use the squeegee on the glass – not on tile, grout, or anything else.

## **Key Points:**

- Glass is incredibly strong, but sharp or gritty materials (like grout) can deeply scratch it.
- If you can feel a scratch with your fingernail, it likely can't be polished out without serious time and effort—and even then, the glass will look distorted.
- The #1 way people ruin their glass is by using the squeegee on tile first, picking up grout, then dragging that across the glass. That's all it takes.
