

PROS AND CONS OF HINGE SIDE

Frameless doors swing both ways. After showering, leave the door swung inward so water drips back into the shower. This setup typically gives you a 28–30" door with a 10" stationary panel.

HINGED RIGHT

Push in or pull out to turn on the water, easily reach over the panel, and enter from the back without getting wet.

HINGED LEFT

You must pull the door out to reach the controls, and upon entering, you would get wet right away.

In this application, we would recommend hinging to the **right wall**.
