

The glass supporting each door is 1/2" glass

STRONG/ACCEPTABLE

When the 1/2" glass panel that supports the 80 lb door is properly fastened to the wall, the assembly is **structurally sound and secure**.

WEAK/UNACCEPTABLE

A 1/2" panel supporting an 80 lb door **cannot be fastened only to another glass panel**. The glass will flex and is not structurally sufficient.

Note: An optional transom solution allows for proper hinge support on the weak side panel while maintaining structural performance.
